

HOW TO READ THIS

- Decided in our plan
- Optional, proposed or still to decide
- Human role
- Outside our system
- Emergency path
- Text and data
- Prediction shown to the user
- Trains or evaluates
- Emergency short-circuit
- User feedback
- S From scratch
- F Fine-tuned
- O Off-the-shelf
- R Rules, not a model type

NEW ON 4 OCT

Two-stage training · public comments, then our posts
Public dataset · Patient Comments, remapped to our labels
Manual data · 600 posts: 400 / 50 / 150
Label set · 11 specialties + Start with a GP
MedRedQA · not used; its labels are weak
Deadlines · talk 5 Oct; code + report 8 Oct

EARLIER CHANGES, 29 SEP – 3 OCT

Redaction · on hold; optional simple scrub only
PII spans, clinician check · dropped
Hosting · deferred; a Colab link is fine
MediQ pool · 10,366 unique posts, not ≈ 13.5k

STILL TO DECIDE

Human baseline form · consent wording; real or paraphrased
Publishing gold labels · not required

DROPPED, AND WHY

Specialty subreddits · Reddit’s terms ban model training
iCliniq · terms ban scraping; copies lack specialty
Self-routing baseline · AskDocs is one general forum

Red-flag rules check the raw text first. The concern is then routed to a top-3 of specialties and explained. The routers train in two stages: on a public set of patient comments and on our own 600 labelled posts. The test split gives every reported number. Dashed items are optional or still to decide.
